PROJECTS

Blog site

This is a dynamic blog website where users can create accounts, log in, and manage their blog posts. It features a rich text editor for creating posts, allowing users to include photos and formatted text. Posts can be edited or deleted as needed.

Features:

- User authentication: Login and register functionality
- Post creation: Rich text editor for adding text and photos
- Post management: Edit and delete posts
- Responsive design: Accessible on various devices

Github: https://github.com/Utsab710/React/tree/main/Blog_site

Todo list

A highly functional and interactive todo list application built using Context API and Redux Toolkit. It provides a seamless experience for users to manage their daily tasks efficiently.

Features:

- State management: Utilizes Context API and Redux Toolkit for state management
- Task operations: Add, edit, delete, and mark tasks as completed
- User-friendly interface: Intuitive design for easy task management
- Persistent storage: Tasks are saved and persist across sessions

Github: https://github.com/Utsab710/React

Parallax scrolling

An engaging webpage designed with HTML, CSS, and JavaScript that implements parallax scrolling. This technique creates an immersive user experience by moving different elements at varying speeds as the user scrolls through the page.

Features:

- Parallax effect: Elements move at different speeds to create depth
- Smooth scrolling: Seamless and smooth user experience
- Responsive design: Compatible with various devices and screen sizes
- Interactive elements: Engages users with visually appealing animations

Node JS Backend

A robust backend setup that supports various functionalities required for web applications. This repository contains backend code for different projects, showcasing skills in server-side development and API creation.

Features:

- API development: Creation of RESTful APIs
- Database integration: Connects with databases for data storage and retrieval
- Authentication: Implements user authentication mechanisms
- Server management: Efficient handling of server requests and responses
